

Siddharth Bhat

Education

- PhD **University of Cambridge.**
(2024 - Ongoing)
- PhD **University of Edinburgh (moved to Cambridge).**
(2022 - 2024)
- Master by Research **International Institute of Information Technology Hyderabad India.**
(2020 - 2021)
- Undergraduate **International Institute of Information Technology Hyderabad India.**
2015 - 2020

Publications

- Towards Neural Synthesis for SMT-Assisted Proof-Oriented Programming: Saikat Chakraborty, Gabriel Ebner, **Siddharth Bhat**, Sarah Fakhoury, Sakina Fatima, Shuvendu Lahiri, Nikhil Swamy. Submitted to ICSE 2024
- Mutable Grammars: Abhinav Menon, Jatin Agarwal, **Siddharth Bhat**, Andres Goens, Tobias Grosser. Submitted to ITP 2024
- Rewriting Optimization Problems into Disciplined Convex Programming Form: Ramon Fernandez Mir, **Siddharth Bhat**, Andres Goens, Tobias Grosser. (In progress)
- Modular, Local Reasoning: The Core Semantics of MLIR: **Siddharth Bhat**, Alex Keizer, Chris Hughes, Andres Goens, Tobias Grosser. (In progress)
- Guided Equality Saturation: Thomas Koehler, Andres Goens, **Siddharth Bhat**, Tobias Grosser, Phil Trinder, Michel Steuwer. POPL 2024
- Lambda the Ultimate SSA: **Siddharth Bhat**, Tobias Grosser. CGO 2021
- QSSA: An SSA based IR for Quantum Computing: Anurudh Peduri, **Siddharth Bhat**, Tobias Grosser. CC 2021
- Optimizing Geometric Multigrid Computation using a DSL Approach: Vinay Vasista, Kumudha KN, **Siddharth Bhat**, Uday Bondhugula. Supercomputing (SC), Nov 2017
- Word Embeddings as Tuples of Feature Probabilities: **Siddharth Bhat**, Alok Debnath, Souvik Banerjee, Manish Shrivastava Representation Learning for NLP, 2020

Internship Experience

- Jul-Sep '23 **Microsoft Research, Redmond.**
Retrieval Augmented theorem proving for the Fstar proof assistant.
- July 1-10 '23 **Adjoint School, Glasgow.**
Researched Markov categories and their relationship to probabilistic programming.
- Winter 2019 **Teaching Assistant for Natural Language: Applications, IIIT-H.**
Monitored projects, took sessions on word embeddings, involving word2vec, GloVe, fasttext.

X03, 64 Storey's Way, Churchill College – CB30DS – Cambridge, United Kingdom

✉ siddu.druid@gmail.com • 📁 pixel-druid.com

- May-Jul '19 **Intern at Tweag.io, Paris, France.**
Re-implemented portions of GHC(Glasgow Haskell Compiler) runtime for [Asterius \(link\)](#), a Haskell to WebAssembly compiler. Involved Haskell, C, and WebAssembly.
- Winter 2018 **Teaching Assistant for Principles of Programming Languages, IIT-H.**
Course covers the book "Essentials of Programming Languages" by Dan Friedman. Helped write lecture notes, set assignments, graded assignments and exams.
- Summer 2018 **Visiting research intern at ETH Zurich, Zurich, Switzerland.**
Investigating formal verification of polyhedral compilation. [PolyIR \(Link\)](#) is a formal specification of polyhedral programs.
- Summer 2018 **GSoC mentor, Polly Labs.**
Mentoring a project to enable Polly's loop optimisations into Chapel.
- Mar-Dec '17 **ETH Zurich, Research Intern at SPCL, Zurich, Switzerland.**
Worked on Polly, a polyhedral loop optimizer for LLVM.
- Jan-Mar '17 **Course content contributor, IIT-H.**
Wrote lecture notes for the [Intro to programming course \(link\)](#)
- May-Jul '16 **Research Intern, IISc Bangalore, Bangalore.**
Worked on PolyMage, DSL compiler for optimising loop transforms. Contributed to ISL and PLUTO. Implemented tiling patterns, optimised PolyMage for stencils.
- Summer 2016 **Selected for GSoC 2016, Google.**
Binding SymEngine, a symbolic math library to Haskell. Had to drop this to intern at IISc, Bangalore. Still maintain the library (symengine.hs)
- Summer 2015 **GSoC 2015, Google.**
Worked on VisPy, a pure Python graphics library which uses OpenGL internally for performance. Successfully completed.

Open Source Contributions

- Coq** Submitted issues, bug-fixes, helped improve developer documentation.
- VE-LLVM** Collaboration with VE-LLVM, a formal semantics of the LLVM compiler toolchain in Coq
- Polly** Implementing support for Fortran, added unified memory abilities to the CUDA backend within Polly, a polyhedral loop optimiser for LLVM. ([Link to commits](#))
- Symengine.hs** GSoC 2016. Haskell bindings to SymEngine, a C++ symbolic manipulation library.
- VisPy** GSoC 2015. Rewrote scene graph for performance. Added visuals, high level API for easy use of plotting. Implemented auto-resizing with **Cassowary**, a linear optimisation library.
- Rust** Contributed to the Rust compiler and ecosystem. Found compiler errors, fixed libraries. Was part of **Piston**, group of Rust programmers that experimented with writing game engines.
- Haskell** Contributed to the Haskell ecosystem. Reported and fixed bugs in *stack*, *stackage*, *diagrams*, *GHC*, etc. ([Link to GHC commits](#)).
- PLUTO** Source to Source C optimiser for loop nests. Improved the PLUTO API that had gone out of sync with master. Discovered bugs in PLUTO for diamond tiling transforms
- PolyMage** DSL Compiler that generates C code. Uses **Polyhedral Compilation** Extended the compiler to add stencils, time iterated-stencils.
- PPSSPP** PPSSPP is a C++ open source PSP emulator. Wrote most of the touch handling code. Implemented atomic locks for audio performance.

My Projects

- Lean-MLIR** Formal semantics for the MLIR compiler framework, defined within the Lean4 proof assistant.
- lz** An MLIR based compiler backend for the Lean4 proof assistant.
- Lean4 Metaprogramming Book** A textbook on metaprogramming in Lean4. I wrote the chapters on tactics and metaprogramming for embedded DSLs.
- Lean-to** A Jupyter kernel for the Lean4 proof assistant.
- Simplexhc** A custom compiler for a subset of Haskell. The goal is to try and apply *polyhedral compilation* ideas to compile a lazy, pure, functional programming language. with LLVM as a backend. Has **64 stars** on github.
- Sublime Bookmarks** A plugin for sublime text to quickly jump between pieces of your codebase. **26k downloads** and counting.
- Cellular Automata** A collection of Cellular Automata written in Haskell. Uses **Comonads** for abstraction. **130 stars** on Github.
- Teleport** A simple tool to switch between projects written in Haskell. Shows how to write "real world Haskell". Published as a **Literal Haskell tutorial**. **90 stars** on github
- TIMi** A visual interpreter of the **template instantiation machine** to understand evaluation of lazy functional languages. **51 stars** on github.

Miscellaneous

- Barvinok** Talk at ETH Zurich: Slides describing the barvinok algorithm to count lattice points in polyhedra
- FunctionalConf '19** Talk on implementing embedded probabilistic programming languages in Haskell (**Slides**)
- Haskell Exchange 2020** Talk on optimizing `smallpt-hs` (a port of a raytracer to haskell) to beat C++ performance (**Slides**)
- FPIndia** Talk on egg: fast and extensible equality saturation. (**Slides**)
- Theory seminar, winter '19** Talk on impossibility of compass-straightedge constructions using field theory.
- math.se** Answer on **math.stackexchange**. **8312 reputation, top 4% overall**. Abstract algebra and differential/algebraic geometry.
